Our Happy Customers

All email clients should take notice, even the ones created by the phone manufacturers, yes Apple & Samsung I'm talking about you also. The feature set and ease of use is remarkable for a company that doesn't generate revenues from ads in their app but rely thru donations and word of mouth. It's intuitive and makes setting up emails quick and easy. Marking emails for later is also a great feature.. Try it out and once you get used to the layout, emailing becomes second nature...

Simply The Best Email Client Available.

Ty

Your search has ended. Simply the best of them all. One of the very few apps that is getting better with every update. Beautiful theme to save on your eyes & your battery. Unified email page. New update added ability to create folders and rename them. I reached out to customer service and got an immediate response. Wish I could delete my pre-installed Android/Google Gmail app. Maybe I should buy this app for "10 million dollars"

This Is The Best!
